

2022

Healing Can't Wait

Timely access to specialized wound care is crucial.

Nearly **7 million Americans** are living with a chronic wound — untreated wounds are at risk for complications such as infection, hospitalization or amputation.

Studies indicate upwards of a 50% increase in amputations during the pandemic. **Healing Can't Wait.**

People most at risk:

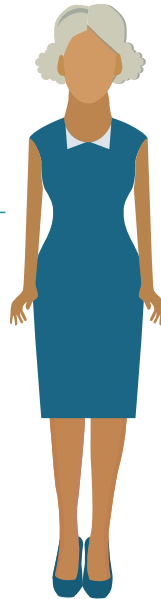

People living with **Diabetes**

1 in 4

people with diabetes will experience a diabetic foot ulcer.

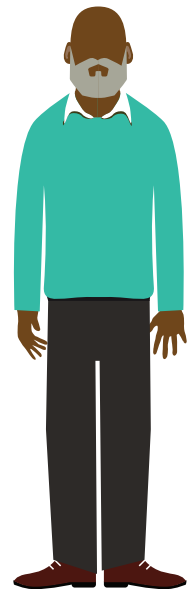

People with **Peripheral Artery Disease**

25%

of people with advanced PAD may require an amputation within one year due to a non-healing wound.

People living with **Heart Disease**

82%

of leg amputations are due to poor circulation of the affected limb.

Seek Care

Regular foot exams can help identify an undetected wound. Check your feet regularly.

If you or a loved one has a non-healing wound, don't wait to see an advanced wound care provider to get on the road to healing.
